

SQL PROJECT- MUSIC STORE DATA ANALYSIS

BY Farhan Adil

Basic Questions

1. Who is the senior most employee based on job title?
2. Which countries have the most Invoices?
3. What are top 3 values of total invoice?
4. Which city has the best customers? We would like to throw a promotional Music Festival in the city we made the most money. Write a query that returns one city that has the highest sum of invoice totals. Return both the city name & sum of all invoice totals?

Medium Questions

5. Who is the best customer? The customer who has spent the most money will be declared the best customer. Write a query that returns the person who has spent the most money?
6. Write query to return the email, first name, last name, & Genre of all Rock Music listeners. Return your list ordered alphabetically by email starting with A?
7. Let's invite the artists who have written the most rock music in our dataset. Write a query that returns the Artist name and total track count of the top 10 rock bands?
8. Return all the track names that have a song length longer than the average song length. Return the Name and Milliseconds for each track. Order by the song length with the longest songs listed first?

Advance Questions

9. Find how much amount spent by each customer on artists? Write a query to return customer name, artist name and total spent?
10. We want to find out the most popular music Genre for each country. We determine the most popular genre as the genre with the highest amount of purchases. Write a query that returns each country along with the top Genre. For countries where the maximum number of purchases is shared return all Genres?
11. Write a query that determines the customer that has spent the most on music for each country. Write a query that returns the country along with the top customer and how much they spent. For countries where the top amount spent is shared, provide all customers who spent this amount?
12. Categorize customers into loyalty tiers based on their overall purchasing history. Write a query that returns the customer ID, full name, country, total orders, total lifetime spend, and average order value. Assign each customer a tier: 'VIP Customer' if total

spend is 100\$ or more, 'Regular Customer' if total spend is between 50\$ and 99.99\$, and 'Occasional Customer' for anything below 50\$. Order the results by total spend in descending order?

13. The finance team wants to assess the store's annual growth rate over time. Write query using window functions that calculates the total revenue and order count for each year, alongside the previous year's revenue and the Year-over-Year (YoY) Growth Percentage. Order the results chronologically by year?
14. Identify tracks in the catalog that have generated zero sales to help optimize licensing costs and cloud media storage. Write a query that returns the Track ID, Track Name, Album Title, Artist Name, Genre Name, and Unit Price for all unpurchased tracks. Order the list by Artist Name and Track Name?
